

Syringe Filters

Discover the ultimate solution for your analytical procedures with our premium Nylon syringe filters. Designed for universal application, these filters are perfect for a variety of sample preparations, including aqueous (non-acidic) and organic samples. Whether you're conducting HPLC, GC, or dissolution sample analysis, our Nylon filters provide exceptional performance tailored to meet your needs.

Engineered to deliver very low extractable levels, they ensure the integrity of your samples is maintained throughout the analysis process. This remarkable combination of physical parameters makes our filters an ideal choice for even the most stringent analytical requirements, empowering you to achieve precise and reliable results every time.

Hydrophobic PTFE syringe filters have broad chemical compatibility, high pH resistance.. They are versatile filters for use with aggressive organic solvent-based solutions and are especially ideal for HPLC sample preparation. The Pure polypropylene housings are color-coded and available in smooth rim or gear rim formats.
